/note="Organ: testis; Vector: pDNR-LIB (Clontech); Site_1:
Sfil (ggccgctcggcc); Site_2: Sfil (ggccattatggcc);
Double-stranded cDNA was prepared from cell line RNA. 5'
and 3' adaptors were used in cloning as follows: S'
adaptor sequence: 5'-ArtCrAcAcGCCATTATGGCC.3' and 3' adaptor
sequence: 5'-ArtCrAcAcGCCCATATGGCC.3' and 3' adaptor
adaptor sequence: 1'-ArtCrAcAcGCCCACATC-dT(30)BN-3'
(where B = A, C, or G and N = A, C, G, or T). Average
insert size 1.75 kb (range 0.9-4.0 kb). 15/15 colonies
contained inserts by PCR. This library was enriched for
full-length clones and was constructed by Clontech
Laboratories (Palo Alto, CA). Note: this is a NIH_MGC
Library."

New dual-specificity phosphatase (DSP)-3 and DSP-3 alternate form polypeptides, useful for identifying modulators DSP-3 or DSP-3 alternate form activity, especially for treating e.g. cancer, autoimmune diseases or allergies.

Claim 7; Fig 1; 86pp; English.

The present sequence is given in a specification providing human dual specificity phosphatase-3 (DSP-3) and a murine DSP-3 variant polypeptide

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention provides the protein and coding sequences of the human dual-specificity phosphatase DSP-3. The DSP-3 protein is involved in cell signalling and the sequences can be used in the treatment of concer, metabolic and autoimmune diseases, allergies, graft-versus-host disease, abnormal cell proliferation and Duchenne muscular dystrophy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New dual-specificity phosphatase-3 polypeptide and its variants useful for treating disorders associated with DSP-3 activity, defects in cell proliferation, differentiation or survival, e.g. Duchenne muscular

The polypeptides are useful for dephosphorylating a substrate of DSP-3, e.g. MAP-kinase. They may be used to treat or prevent diseases associated with cell proliferation, immunosuppression, metabolic diseases, or abnormal cell growth or cell cycle abnormalities. They are also useful for identifying agents that modulate their activity. The modulators are activity, e.g. Duchenne muscular dystrophy, cancer, graft-versus-host disease, autoimmune diseases, allergies, metabolic diseases, abnormalities. The modulating agents are useful for modulating associated with metabolic diseases, abnormal cell growth, abnormal cell proliferation and cell cycle abnormalities. The modulating agents are useful for modulating, modifying or altering differentiation or survival

Acc69489 to ACC69495 encode the human dual-specificity phosphatases
designated DSP-18a to DSP-19f and prototypical DSP-18pr given in ABR43450
to ABR43456. DSP-18 proteins have the ability to dephosphorylate an
activated mitogen activated protein (WAP)-kinase. DSP-18 sequences have
cytostatic, immunosuppressive and antiallergic activities, and can be
used as modulators of MAP-kinases and signal transduction. The DSP-18
proteins can be used for identifying antibodies and other modulators
(particularly inhibitors) of DSP-18 activity. The DSP-18 proteins may be
used to modulate call proliferation, call differentiation and call
curvival, or to treat diseases associated with call proliferation,
differentiating dephosphorylation of DSP-18 proteins are especially useful
Cof stimulating dephosphorylation of DSP-18 proliferative response in a
DSP-18 activity can be used for modulating a proliferative response in a
patient affilicted with a disease. Burchane muscular dystrophy,
and a patient affiliated with a disease.
                                                                                                                                                                                                    New DSP-18 dual-specificity phosphatases, useful for modulating cell proliferation, differentiation or survival, or for identifying modulators of DSP-18 activity for treating e.g. cancer or graft-versus-host disease in a patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   cancer, graft-versus-host disease, autoimmune diseases, allergies, metabolic diseases, abnormal cell growth, abnormal cell proliferation, cell cycle abnormalities) associated with DSP-18 activity. The present sequence represents a human DSP-3 polynucleotide sequence which is used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 926 BP; 233 A; 230 C; 242 G; 221 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                in an example from the present invention

This invention describes novel small interfering RNA (siRNA) polynucleotides capable of interfering with expression of a polypeptide having protein-tyrosine-phosphatase (PTP) activity. The products of the invention have cytostatic, immunomodulator, antimicrobial, antidiabetic and anorectic activity. The methods and compositions of the present invention are useful for treating diseases or conditions associated with aberrant expression or activity of the protein tyrosine phosphatase, such as cancer, autoimmune diseases, infection, inflammation, diabetes and obesity. This sequence represents a siRNA directed against dual specificity phosphatase (DSP) expression.
                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  240

The present invention relates to the isolation of novel human enzyme polypeptides (AAU22915-AAU23814), and the cDNA and genomic sequences encoding them. The enzyme polypeptides of the invention may comprise the functional classes of oxidoreductases, transferases, hydrolases, lyases, isomerases or ligases. The sequences of the invention are useful in the disorders including hyperpoliferative disorders (e.g. cancer), immunodeficiency disorders (e.g. AIDS) autoimmune disorders (e.g. archael), intoloding hyperpoliferative disorders (e.g. archael), cartivitis), neurological disorders (e.g. AIDS) autoimmune disorders (e.g. archael), cardiovascular disorders (e.g. atherosclerosis), blood-related disorders (e.g. paemophila), reproductive disorders (e.g. atherosclerosis), inflammatory disorders (e.g. aschma), cardiovascular disorders (e.g. atherosclerosis), reproductive disorders (e.g. infectious disorders (e.g. Influenca). The polymuclectides of the invention can also be used in gene therapy. AAS40785-AAS41684 represent convention. Note: The sequence data for this patent did not form part directly the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
Novel polypeptides and polynucleotides useful for diagnosing, preventing, treating neural, immune system, muscular, reproductive, pulmonary, cardiovascular, renal, proliferative disorders and cancerous diseases.

                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to the isolation of novel human neoplastic disease associated polypeptides (AAU21568-AAU21851), and cDNA and DNA sequences encoding for these polypeptides. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of disorders involving neoplastic disease such as hyperproliferative disorders involving neoplastic disease such as hyperproliferative disorders involving neoplastic disease such as hyperproliferative disorders involving neoplastic disease. bludged cancer, brain stem glioma, adult liver cancer, childhood cerebellar astrocytoma, or Hodykin's lymphoma). The sequences of the invention may also be useful for treating other disorders such as neural disorders, immune system disorders, muscular disorders, cardiovascular disorders and renal disorders, muscular disorders, cardiovascular disorders and renal disorders and renal in gene therapy. AAS34767-AAS35505 represent cDNA sequences encoding for the novel human neoplastic disease associated polypeptides of the the novel human neoplastic disease associated polypeptides of the the printed specification, but was obtained in electronic format directly from MIPO at ftp.wipo.int/pub/published_pct_sequences

New isolated human neoplastic disease-associated polypeptides and polynucleotides, useful for diagnosing, preventing, prognosticating or treating medical conditions such as cancer, AIDS, diabetes or Parkinson's disease

239; 302pp; English ဋ SEO ID Claim 1;

```
The invention relates to one of 238 disclosed human neoplastic disease-
associated polypeptides encoded by 171 disclosed CDNA sequences
(including their domains, epitopes, full-length protesins, allelic variants
or species homologues). Also included are there encoding nucleic acids, a
recombinant vector comprising the nucleic acid, a recombinant host cell
comparising the nucleic acid (expressing the protesin), an isolated
comparising the nucleic acid (expressing the protesin), an isolated
comparising the nucleic acid (expressing the protesin), an isolated
comparising the nucleic acid (expressing the protesin), an isolated
comparising a medical condition, diagnosting partner in a belological condition or a susceptibility to a pathological condition in a subject,
in a biological assay, and the gene corresponding to the CDNA sequence.
The polypeptides, polynucleotides and antibodies are useful for
detecting, preventing, diagnosing, prognosticating, treating or
ameliorating medical conditions such as hyperproliferative diseases or
cancer, autoimmune disorders (e.g. diabetes, rheumatoid arthritis,
systemic lupus erythematosus, multiple sclerosis, autoimmune thyroiditis
or haemolytic anaemia), haematopoietic or haematologic disorders (e.g.
canaemia or thrombocytopaenia), allergic reactions including asthma or
eczema, inflammatory disorders (e.g. ischaemia-reperfusion injury,

(HUMA-) HUMAN GENOME

WPI; 2002-122018/16. P-PSDB; ABB90435 Novel 1405 isolated polypeptides, useful for diagnosis, treatment and prevention of neural, immune system, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal and proliferative disorders

Claim 4; SEQ ID NO 1406; 2081pp + Sequence Listing; English

The invention relates to novel genes (ABL89449-ABL90853) and proteins (ABB89040-ABB90444) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are useful in isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune clasorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, dabetes mellitus, Crohn's disease, cardiovascular diseases such as myocardial ischaemias; (d) wound healing (e.g. nultiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular diseases such as myocardial ischaemias; (d) wound healing (e.g. nultections diseases e.g. cerebral anoxia and epilepsy; and (f) infections diseases such as viral, bacterial, fungal and parasitic infections. Note: The sequence data for this patent did not form part of from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to phosphatase proteins and coding sequences. The present sequence is one such phosphatase coding sequence. Phosphatases are enzymes that catalyse the dephosphorylation of proteins modified by phosphorylation of serine, threonine or tyrosine residues. The phosphatases are useful for treating a variety of diseases: for example cancer e.g. breast, urogenital, prostate, head, neck, lung cancers, sprovial sarcomas, renal cell carcinoma, non-small cell lung cancer, hepatocellular carcinoma, pancreatic endocrine tumours, stomach cancer, glioblastoma, colorectal cancer and thyroid cancer, pathophysiological hypoxia, cardiac dysfunction and/or vascular disorders, myopathies, congenital muscle disorders, Papillon-Lefevre syndrome, Cowden disease, ectodermal dysplania, Moeblus syndrome, blornstad syndrome, schizophrenia and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9

The present sequence, the coding portion of which is also claimed, encodes human mitogen-activated protein kinase phosphatase X (MKDX). MKPX is amplified and overexpressed in human cancers, including colon cancer, ovarian cancer and prostate cancer. The MKDX gene, its expressed protein products and antibodies can be used diagnostically or as targets for cancer therapy or vaccine. They are also used to identify compounds and reagents useful in cancer diagnosis, prevention and therapy, and for determining the efficacy of a therapeutic treatment regimen in a patient. A claimed method of blocking in vivo expression of the gene involves administering a vector encoding MKDX small interfering RNA (siRNA)

nucleic acid. Also describes an isolated cancer associated phosphatase nucleic acid. Also described: (1) a method of screening for biologically active agents that modulate a cancer associated phosphatase function; (2) a method for the diagnosis of cancer; (3) a method for inhibiting the growth of a cancer cell; (4) methods of screening for targets of a cancer associated phosphatase, where the targets are associated with signal transduction in cancer cells; (5) a compound (C) for the treatment of a pharmaceutical carrier and (C); (7) methods for treating a tumour; and (8) a method for visualising a tumour in a patient. A cancer associated phosphatase of the present invention has cytostatic, immunosummressive antidiaberic manners.
                                                                                                                                                                                                                                                                                        phosphatase of the present invention has cytostatic, immunosuppressive, antidabetic, neuroprotective, antinheumatic, antiarthitic, antidabetic, natiarteriosclerotic, antinheumatic, underthitic, antidated and antidated cacids encoding the cancer associated phosphatases and nucleic acids encoding the proteins are useful for visualising tumours in patients or colon cancer. The polypeptides and nucleic acids may also be used for treating hyperproliferative diseases, such as autoimmune disease, diabetes mellitus, multiple sclerosis, rheumatoid arthritis, psoriasis, atherosclerosis, inflammation, scarring, endomerriosis or angiogenesis, determining the effectiveness of drugs, determining batient prognosis, or as targets for screening pharmaceutical seguence encodes the human cancer associated phosphatase MKPX, which is

The sequences were isolated from cDNA libraries prepared from various human tissues. The PHSP proteins are useful for the diagnosis, treatment and prevention of proliferative disorders, immune

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV0010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate calc cancer in a patient; (f) assessing the prostate calc cancer in a patient; (f) assessing the prostate cancer in a patient; determining whether prostate cancer has metastasized in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient; (l) is also useful as a pharmacodyanamic or pharmacogenomic marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                GGAATGGGATGAACAAGATCCTGCCCGGCCTGTACATCGGCAACTTCAAAGATGCCAGAG 147

                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV0010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether progression of afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (d) assessing the efficacy of a test compound to inhibit prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate call carcinogenic potential of a compound; (g) determining whether prostate cancer has metastasized in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient; (i) is also useful as a pharmacodysnamic or pharmacogenomic marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            267
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      187 GGCCTATGTTGGAGGGAGTTAAATACCTGTGCATCCCAGCAGCGGATTCACCATCTCAAA 246

Note=Inactive. Lacks the active site;
-!- TISSUE SPECIFICITY: Isoform 2 is highly expressed in testis.
-!- SIMILARITY: Belongs to the protein-tyrosine phosphatase family.
Non-receptor class dual specificity subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
